Ron Riker
SHUR-TITE® Products
Caminoverde, Inc.
P. O. Box 2283
Round Rock, Texas 78680

Dear Ron,

I have been retired as Executive Director of the Texas Department of Transportation for 6 years. I served in this capacity from March 1998 to September 2001. As you know I held various positions for the Texas DOT over my 40 year career, including District Engineer for 11 years. The importance of Maintenance to the total operation was one of my passions so when I was appointed to Executive Director I immediately reestablished the Maintenance Division. Up to now I felt it would not have been appropriate for me to have expressed my professional opinion about your products and their performance. Recently as I have driven around Texas I have noticed more and more of your products. Whether it is your delineators or your mailbox supports they always stand out as being superior to your competitors because they are straight and more visible.

In 1999 the Texas Legislature issued a request to TXDOT to utilize recycled materials as much as possible. Specifically, Texas had several old tire sites that had been abandoned and needed to be cleaned up. At that time I issued a request to TXDOT employees to encourage our suppliers to develop products that utilized recycled tire rubber. Shortly thereafter is when I first became aware of Caminoverde, Inc. and your SHUR-TITE® products. Your products exceeded all my expectations by not only utilizing recycled materials, but their design characteristics were a significant improvement over what was currently being used. Most significantly was the reduction in long term labor which not only resulted in our ability to do more with less and just as importantly reduced our employee's exposure to traffic. Specifically, for example; we noticed that your delineators after installed, took a more permanent approach to installation and they stayed straight requiring less maintenance. Additionally, replacement required considerably less time than competitive products. Your universal socket system was innovative in its design and offered our maintenance personnel the ability to carry one product on their trucks that could be used to do multiple jobs.

I am writing this letter to not only endorse your products but offer my address and phone number should anyone want to correspond with me directly concerning the integrity of your products or your organization.

Sincerely,

Charles W. Heald, P.E.
