

CTB 8" Cup Mount Delineator

SHUR-TITE® CTB 8" Cup Mount Delineator Specification

Item # GQ8WR1

Item # GQ8YR1

1. The Shur-Tite® CTB Mount Delineator is a field-proven, 8-inch-tall, impact-resistant delineator manufactured from prime copolymer material and designed specifically for mounting on concrete traffic barriers.
2. The bright, high-visibility color is compounded with a premium UV inhibitor package to resist fading and degradation from prolonged sun exposure.
3. The exterior surface features an extremely smooth finish that resists road grime, dirt buildup, and mildew. The highly visible color enhances delineation during low-light and adverse weather conditions, including situations where headlights may not be in use.
4. The delineator post features a 2-3/8" outside diameter and is sealed and flattened to accommodate up to 12 square inches of sheeting per side.
5. The robust construction of the Shur-Tite® CTB Mount provides excellent structural integrity, allowing it to withstand wind loads, snow plow windrows, and the rigors of continuous highway use.
6. The 5" diameter mounting cup includes four anchor points and is designed for installation using 1/4" Tapcon screws or a high-bond strength adhesive, depending on application requirements.
7. Shur-Tite® Products offers factory representative support for initial installations, providing on-site training to DOT crews or contractors to ensure state standards are met and manufacturer installation recommendations are followed.
