

Shur-Tite® U-Flex Flush Mount Delineator Specification

- 1) The U-Flex® Flush Mount Delineator is multi-hit, omni-directional and self-righting, providing a long lasting, extremely durable product requiring little field maintenance.
- 2) Posts are manufactured utilizing a proprietary blend of urethane.
- 3) Material of post incorporates a premium UV inhibitor package to resist harmful effects of the sun.
- 4) Bright White finish of post is extremely smooth to resist road grime and mildew. The White finish is highly visible when most needed in low-light and poor weather conditions when headlights might not be in use.
- 5) Heavier wall thickness of post provides enough structural integrity to prevent collapse after impact from motor vehicles, storms or high winds.
- 6) The U-Flex Flush Mount Delineator design is comprised of only 2 components, a thermoplastic base and a urethane square to round post. This design allows the post to be replaced independent of the base.
- 7) The flexible post is a simple one piece, non-metallic design, assuring long-life in severe corrosive environments.
- 8) Special tools will not be required for post or base change-outs. System is designed so that it will not be obstructed with grime, dust or sand, hindering the process of post replacement.
- 9) Post replacement, if required will take less than 60 seconds, minimizing the field technician's exposure to traffic, a key safety issue.
- 10) System can be used with varying colors of reflectivity for 360-degree visibility. {White, Red, Yellow, Green and Blue} This versatility accommodates the use of the product in various applications such as bike lanes, managed lanes, highway crossover markers, delineators, and channelizers.
- 11) U-Flex Flush Mount will be installed using an epoxy 2-part epoxy.
- 12) Shur-Tite® Products provides a Factory Representative for training on initial installation to assist DOT Crews or Contractors. This training ensures that state standards are met for installation requirements.
